

WINTER IS COMING – START YOUR WINTER PREP!

The only thing predictable about Colorado weather is its unpredictability. The first frost could happen sooner than you may think! Don't get caught in the frost and risk broken pipes. Plan your sprinkler winterization now.

If you're worried about doing it alone, check with your HOA about a scheduled community sprinkler blowout event. Otherwise, find a landscaping company offering sprinkler winterization services.

Remember: Cracked pipes don't just cost money; they also waste precious water as well.

HERE'S HOW TO BLOW OUT YOUR SPRINKLERS ON YOUR OWN:

Step 1: Shut off your water

Step 2: Deactivate your sprinkler timer

Step 3: Drain the water

Step 4: Insulate any components above ground
