

2025 WATER QUALITY REPORT NOW AVAILABLE

At Fort Collins-Loveland Water District, delivering safe, high-quality water is our top priority. We're proud to share that the 2025 Water Quality Report (covering the 2024 calendar year) confirms our drinking water meets all state and federal standards.

Our water, sourced primarily from the Poudre River and Horsetooth Reservoir, along with a few additional sources, is treated at the Soldier Canyon Water Filter Plant and the City of Fort Collins. The water is then distributed to more than 67,000 customers throughout our service area.

We remain committed to transparency and excellence in water delivery. You can read the full report and learn more about your water quality at: <https://bit.ly/FCLWD2025report>
